Postcode

Postcode type and position

6 digits in separate line, below the number and the name of the delivery post office

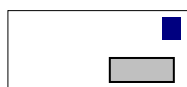

PAK Coding method

4 5 6 7 6 9

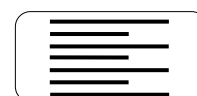

Position of the address on the envelope

Bottom right-hand corner

Alignment of address lines

Left aligned

Address format

Post Serbia has introduced a new six-digit postcode -“postal address code” (PAK) which goes down to the street level. To address a mail item properly to Serbia, the PAK shall be included in the address below the number and the name of the delivery post office.

For items that are addressed to P.O box, "poste restante" or for military address, the PAK is not needed in the address.

For rural address with no official street name assigned, a blank line is left between the addressee and locality details.
